¹ Marmara University, Institute of Pure and Applied Sciences, Biology Program, 34722, Goztepe, Istanbul, Turkey

Abstract

A new identification key, full descriptions, and distribution records based on various herbaria of Turkish *Moenchia* are given in this study. Detailed and comparative descriptions of the studied species have been prepared. Also, a new species, *Moenchia akmanii* M.Keskin sp. nov., is described as for science. The new species is morphologically similar to *M. graeca* that is but differs by long stems, different leaves, non-flowering shoots, 3-nerved sepals, mauve anthers, etc. The new identification key has been created to distinguish taxa distributed in Turkey.

Keywords: *Moenchia*, *Moenchia akmanii*, new species, Turkey

----- * -----

Türkiye'deki *Moenchia* (Caryophyllaceae) cinsi

Özet

Bu çalışmada, Türkiye'de yetişen *Moenchia* cinsine ait yeni teşhis anahtarı, betimlemeler ve dağılımlar çeşitli herbarium numunelerine dayanılarak verilmiştir. İncelenen türlere ait detaylı ve karşılaştırmalı betimlemeler hazırlanmıştır. Ayrıca *Moenchia akmanii* M.Keskin sp. nov. adıyla bilim dünyasına yeni bir tür tanıtılmıştır. Bu yeni tür, morfolojik olarak *M. graeca* türüne benzemekle beraber ondan uzun gövdesi, farklı yaprakları, çiçeksiz sürgünleri, 3-damarlı sepalleri, mor anterleri vb. karakterleri ile ayırmaktadır. Türkiye'de yayılış gösteren taksonları ayırt etmek için yeni teşhis anahtarı oluşturulmuştur.

Anahtar kelimeler: *Moenchia*, *Moenchia akmanii*, yeni tür, Türkiye

1. Introduction

Moenchia is a small genus with only 3 to 5 species living mainly in the Mediterranean area [1]. It is certainly related to the genus *Cerastium*. In particular, it is separated from the genus *Cerastium* with non-disintegrating petals.

Four species of *Moenchia* have been reported in A Checklist of the Flora of Turkey [2]. After examining much-related literature [1, 2, 3, 4, 5, 6, 7, 8] about this genus in detail, an unnamed specimen is decided to be a new species and proposed here as *Moenchia akmanii* M.Keskin.

2. Materials and methods

During the revision of the genus *Cerastium* for Illustrated Turkish Flora, the genus *Moenchia*, which is closely related to this genus, was also studied. During this working time, all the specimens of *Moenchia* genus present in various herbaria (E, AEF, HUB, ISTE, ISTF, ISTO, MARE, MUFE, ANK, NGBB, VANF, IZEF - These herbarium samples were examined by using only the high-resolution pictures obtained on the website.-) was examined morphologically. The findings obtained during the examinations were comparatively studied. As a result, detailed

descriptions and distributions were prepared for all species and mapped. Furthermore, an unidentified specimen is described as a new species to science from Central Anatolia (Ankara province, Turkey).

3. Results

3.1. Description of the genus *Moenchia*

Moenchia Ehrhart, Beitr. Naturk. 2: 177 (1778). (nom. cons.), non Medik., non Roth.

Type species: *Moechia erecta* (=*Moenchia quarternella* Ehrh. (as *Mönchia quarternella*)).

Syn.: *Alsinella* Moench., Meth. 222 (1794) (non Hill 1756). *Doerriena* Borkh., Rhein. Mag. 1: 528 (1793).

Annual herbs. Stems glabrous, thin, ascending to erect, simple or sometimes branched. Cauline leaves connate, sessile or sometimes little petiolate in basal leaves; blade 1-veined, linear to linear-ob lanceolate, apex acute or subacute. Inflorescence terminal, 1-10 flowered, spreading cymes or flowers solitary; bracts paired, subfoliaceous with scarious margins. Pedicels erect or subpatent in fruit. Sepals 4 or 5, free, green, usually linear-lanceolate, herbaceous, scarious, apex acute; petals 4 or 5, white or blue-mauve, blade apex generally entire or rarely small-dentate; stamens 4, 8 or 10; styles 4 or 5; filaments longer than anthers; anthers generally ovate to spherical; stigmas 4 or 5; ovary ovate to subcylindrical and longer than or equal to stillus. Capsules cylindrical, opening by 8 or 10 revolute teeth, shorter than or equaling sepals. Seeds small, more, brown, tuberculate to submuricate.

3.2. The New Identification key for *Moenchia* in Turkey

- 1. Sepal and petal 4
 - 2. Stamen 4 5b. *M. erecta* var. *octandra*
 - 2. Stamen 8 5a. *M. erecta* var. *erecta*
- 1. Sepal and petal 5
 - 3. Petal blue-mauve..... 2. *M. coerulea*
 - 3. Petal white
 - 4. Petal longer than sepal 1. *M. mantica*
 - 4. Petal at most equal to sepal
 - 5. Stems 2-15 cm; sepal 1-nerved; anthers yellow..... 4. *M. graeca*
 - 5. Stems 15-25 cm; sepal 3-nerved; anthers mauve..... 3. *M. akmanii*

3.3. The Checklist of *Moenchia* in Turkey with a New Species

3.3.1. *Moenchia mantica* (L.) Bartl. Cat. Hort. Gött. 5 (1839). [Fig.1, 2]

Type: Described from Verona, Italy (Hb. Linn. 603/28, photo!).

Syn.: *Cerastium manticum* L., Sp. Pl. Ed.2, 629 (1762). *M. dolichotheca* Somm. & Lev. in Act. Hort. Petrop. 13: 40 (1893).

Annual herbs. Stems ascending to erect, mostly dichotomous branched, 10-40 cm. Leaves 15-20 x 3-5 mm, glabrous, lanceolate to very narrowly elliptic-lanceolate, acute rarely obtuse. Inflorescence strict, usually many-flowered. Bracts ovate to lanceolate with broad scarious margins. Pedicels unequal, longest pedicel 45-70 mm. Sepals 5-parted, 6-9 mm, broad and lanceolate, elevated 1-veined, and c.10 thin vein. Petals white, 5-parted, slightly 2 x longer than the sepals. Stamens 10, anthers yellow. Capsule ovoid, at most equal to sepal. Seeds 0.8-1.1 mm.

Examined specimens

Ağrı: Patnos, Top dağı, Kızkapan köyü üstleri, step, 390 17' 350"N ve 420 38' 200"E, 1850m, 17 v 2006, H.Emlik 1616 (VANF 3642!).

Afyonkarahisar: Bayat, Otlugedik sırtı kuzeyi, 1360m, 22 v 1975, M.Vural (GAZI 197!). Bolvadin, Emirdağ, Gedik yaylası, 1600m, 8 vi 1987, Y.Akman (ANK 14354!). Kocatepe, kırac sırtları, 22 v 1966, A.BAytop, B.Çubukçu (ISTE 9392!).

Ankara: Beypazarı, Alemdar köyü üstü, 1400m, 1 vii 1971 (ANK 788!). Beypazarı, Cuma deresi, köprübaşı, 2 vii 1972, Y.Akman (ANK 8516!). Beypazarı, Deliyar-Cuma deresi, *Pinus nigra* ormanı, 1400m, 22 vii 1972, Y.Akman (ANK 8519!). Beypazarı, Elmabeli, *Pinus nigra* orman açıklığı, 700m, 27 v 1971 Y.Akman (ANK 788-A!). Beypazarı, Karaşaraltı, 1000m, 28 v 1971, Y.Akman (ANK 788-B!). Beypazarı, köprü yanı, 28 v 1972, Y.Akman (ANK 8520!). Beypazarı, Nallıkaş, nemli çayırlar, 1500m, 26 vi 1973, Y.Akman (ANK 8517!). Elmadağ, 1600m, 25 vi 1932, W.Kotte (ANK 122!). Kızılcahamam, Karaçam ormanı, 26 vi 1960, A.Huber-Morath (ANK!). Kızılcahamam, Soğuksu Milli parkı, yanık sırtı, 1300-1350m, 12 v 1990, Ö.F. (GAZI 1328!).

Aydın: Çine çayı vadisi, 21 iv 1969, K.Fitz (EGE 3973!). Çine çayı kenarı, 21 iv 1969, H.Güner (EGE 15184!). Dalaman-Cumalı 6.6km, çalışlık yamaçta, 24 iv 1992, A.Byfield B 49 (ISTE 64875!).

Balıkesir: Ayvalık güneyi, Yassı tepe, 150m, 28 v 1997, K.Alpinar (ISTE 73953!). Ayvalık, Hakkıbey yarımadası, Cennet koyuna bakan yamaçlar, 15 iv 1998, K.Alpinar (ISTE 74992!). Edremit, Bursalıhanı, *Pinus brutia* ormanı, 10 v 1966, H.Peşmen (EGE 15192!). Edremit, Kumluca, Eybek kule yolu, bir çoğu bir arada, bol miktarda, güney, 940m, 23 iv 1999, M.Tokcan (ISTO 28525!). Erdek, Marmara adası, maki ve çayır, 2 v 1965, E.Demiriz ((ISTF 5203!). Kozak, Kiranlı köyü, Madran çayı, 15 v 1966, H.Peşmen 565 (EGE 5885!). Marmara adası, Marmara yakınları, kireç ocaklıları üstündeki tepeler, 8 v 1971, A.Baytop, G.Ertürk, F.Öktem (ISTE 19636!). Marmara adası, Nahiye merkezi, Çınarlıköy arasındaki yamaçlar, 100m, 6 v 1978, E.Tuzlacı (ISTE 39174!). Marmara adası, *Pteridium* altında, 550m, 17 vi 1968, A.Baytop, T.Avcıgil (E ! ve ISTE 13740!).

Bilecik: Bozöyük-İnegöl, c.37 km from İnegöl and c.1km from river Aksu to Bözöyük, N of the main road. Fairy steep slope, facing S, with open deciduous forest affected by grazing. 830m, 21 v 1990, Raino Lampinen 7660 (EGE 33879!).

Bitlis: Tatlıkaynak köyü, step, 1550m, 18 v 2002, A.Altıok 2286 (VANF 3709!). Bitlis'in 5km kuzeyi, sulu çayırlar, 1350m, 18 v 1966, Davis 43139 (E !). Tatvan ile Küçüksu arası, 1750m, 19 v 1966, Davis 43293 (E !).

Bolu: Abant girişi, 840m, 25 v 1980, Y.Akman, E.Yurdakulol (ANK 10557). Abant, 1350m, 26 vi 1975, A.Baytop (ISTE 32276). Abant, 5 vii 1975, A.ve T.Baytop (ISTE 32405a!). Abant, Alpagut'u geçince *Carpinus betulus* ormanı, 1000m, 10 vi 1978, Y.Akman (ANK 9449!). Bandırma, Şahinburgaz, maki zonu, 300m, 19 v 1976, Y.Akman (ANK!). Bolu'ya inişte, Kuzey yamaçları, meşe ormanı, 800m, 10 vi 1980, Y.Akman, E.Yurdakulol (ANK 10558!). Gerede, Aktaş ormanları, Aşağı ovacık, *Pinus sylvestris* katı, 1400m, 3 vii 1975, O.Ketenoglu (ANK 428!). Gerede-Aktaş ormanları, sarıçam katı, 1400m, 3 vii 1975, O.Ketenoglu (ANK 428!). Bolu işletmesi, 14/00, Kökez bölgesi, Sultan serisi, bölge no: 38, bakı N, 930m, 16 vii 1978, H.Aksoy 371, (ISTO 25661!). Bolu işletmesi, 14/00, Kökez bölgesi, Sultan serisi, bölge no: 44, bakı SSE, 970m, 9 vi 1978, H.Aksoy 58, (ISTO 25573!). Köroğlu, Karaçamaltı, anakaya volkanik, 1400m, 26 vi 1975, Y.Akman (6310!). Sarı Mestan, 27 vi 1997 Y.Akman (ANK!). Dolubaba-Yığitalı, 14 v 1955, B.Tutel ve M.Heilbron (ISTF 14129!).

Bursa: Işıklar köyü, 5 v 1950, T.Baytop, A.Berk (ISTE 297!). Uludağ, Soğukpınar, 500-1000m, 15 v 1962, Dudley 34751 (E!). Uludağ, 27 iv 1883, P.Sintenis (E !). Uludağ, 17 v 1899, J.Bornmüller 4210 (E !). Uludağ, orman zonu, 1450m, ix 1964, F.F.E.De Wilde (E !). Uludağ, Softaboga'nın batısı, Abietum, 1700m, 10 viii 1951, H.Demiriz (E !).

Çanakkale: Gökçeda, Bademli köyü üstü, Yıldız tepesi kuzeyi, 0m, 16 iv 1977, Ö.Seçmen, E.Leblebici (EGE 20346!). Gökçeda, Değirmendere Ketveren tepesi, kuzey doğusu, 30m, 19 v 1975, Ö.Seçmen, E.Leblebici (EGE 23039!). Gökçeda, Pınarbaşı-Kaleköy arası, vadi içinden, 100m, 18 iv 1977, Ö.Seçmen, E.Leblebici (EGE 20345!). Gökçeda, Yıldız köyü Kuzulimanı arası, 15m, 14 iv 1975, Ö.Seçmen, E.Leblebici (EGE 23038!). Gökçeda, Yıldız köyü Kuzulimanı arası, 20m, 14 iv 1975, Ö.Seçmen, E.Leblebici (EGE 23040!). Kurudağ, 28 iv 1968, A. ve T. Baytop (ISTE 12560!). Yenice, Kalkım Ayı gediği yolu, Karaçam altında bol miktarda, 840m, 16 v 1999, M.Tokcan (ISTO 28526!).

Çankırı: Atkaracalar, Dumanlıdağı, Avlağa-Sivren yaylası arası, step, 1500-1600m, 9 vii 1992, Ahmet Duran (GAZI 1572!). İşık dağı, Karaçam altı, 1400m, 12 vi 1975, Y.Akman (ANK 6317!). Saka dağı, yayla, 1050m, 27 vi 1980, M.Demirörs (ANK 172!).

Denizli: Babadağ, Babadağ ilçeden Başalan yaylasına çıkarken 2km, yamaçlar, 1300m, 9 v 1986, S.Oluk, Ö.Seçmen, Y.Gemicı (EGE 34863!). Babadağ, Gökbelen yayla, Acılık tepesi, eğimli arazi, 1750m, 17 v 1986, S.Oluk (EGE 34869!). Buldan, 29 vi 1965, C.Regel (EGE 15183!). Gürpınar, Hamurkesen köyünün arkaları, step, 2000m, 22 v 2002, M.Ünal 6760b (VANF 3779!). Gürpınar, Hamurkesen köyünün arkaları, step, 2000m, 22 v 2002, M.Ünal 6814 (VANF 3780!).

Yalova: Orhangazi yolu, 3 v 1950, A.Berk, T.Baytop (ISTE 2474!).

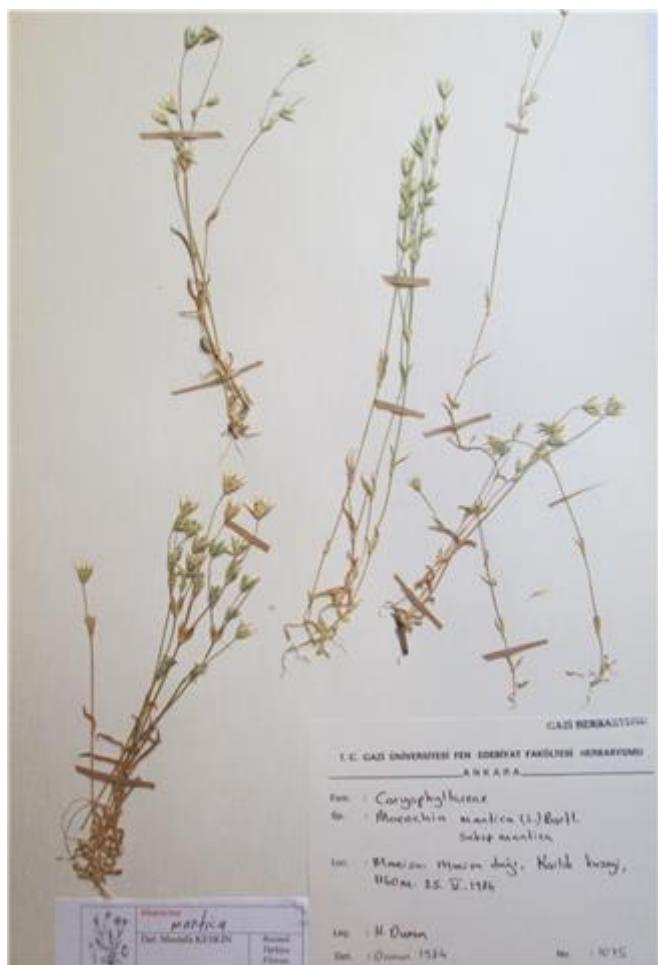

Figure 1. A Herbarium sheet

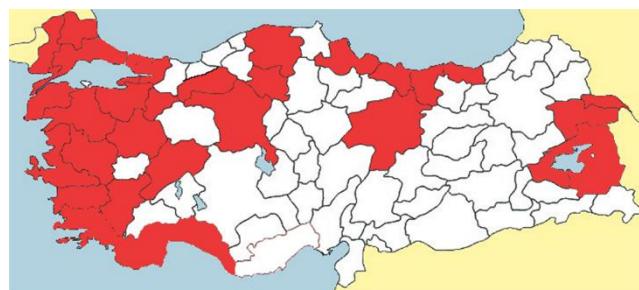

Figure 2. Distribution map

It is probably the most widely distributed and is available in many parts of Turkey. It is the most basic member of slightly moist meadows with white flowers, especially in early spring. *M. mantica* is a very characteristic species due to its double-length petals of calyx, its upright posture, and its early nature compared to other species.

3.3.2. *Moenchia coerulea* Boiss., *Fl. Orient.* 1: 712 (1867). [Fig. 3, 4]

Syn.: *Cerastium coeruleum* Boiss., Diagn. Ser. 1(1): 53 (1853). *M. mantica* L. var. *violascens* Azn., Bull. Soc. Bot. Fr. 44: 166 (1897). *M. mantica* L. forma *coerulea* (Boiss.) Janchen, Zwei für Österreich neue Pflanzen, 5: 59 (1907). *M. mantica* L. var. *jolantha* Kováts, Ungarische Botanische Blätter – 29: 49 (1930).

Holotype: Montes Smyrne, Mai 1842, Boissier (E!).

Annual herbs. Stems usually strict, simple or branched from base, dichotomous branched at upper, 10-20 cm. Leaves 7-15 x 2-4 mm, glabrous, linear-lanceolate, acute. Inflorescence strict, 2-7 flowered. Bracts broad ovate-lanceolate with broad scarious margin. Pedicels unequal, longest pedicel 40-75 mm. Sepals 5-parted, 6-9 mm, oblong-lanceolate, mauve at upper, usually veins obscure, main vein sub elevated. Petals blue-mauve, 5-parted, longer than the sepals, usually not 2 x calyx white. Stamens 10, anthers yellow. Capsule subovoid, exceeding to sepals.

Examined specimens

Afyonkarahisar: Bayat, Bağlık mevkii üzeri, 1120m, 23 v 1975, Mecit Vural (ANK 198!).

Antalya: Akseki-Bademli arası, Toy alanı, step, 1400m, 25 v 1983, M.Koyuncu 6040-S.Erik (HUB 02879!).

Aydın: Eskiçine, Madrandağı, Topçam köyü güneyi, yamaçtan, 800m, 29 iv 1977, A.Yayıntaş, A.Yürül, A.Tamar; F.Seliyan (EGE 15180!).

Denizli: Çivril, Sorgun'dan-Kocayayla'ya çıkarken, 1250m, 5 v 1983, Y.Gemici (EGE 25460!). Sarayköy, Babadağ-Hisarköy'den Tekçam'a doğru 7km, 1050m, 22 v 1972, G.Oğuz, Ö.Seçmen, E.Leblebici, T.Kesercioğlu (EGE 15181!).

Edirne: Merkez, Edirne'nin 8km batısı, 100m, 19 iv 1966, Davis 41971 (E!).

Elazığ: Kup dağı, Sumalı yayla yeri, *Quercus* topluluğu, 1600m, 10 v 1982, H.Susen (ANK 1089!).

Isparta: Şarkikaraağaç, Kızıldağ milli parkı, Kolonkaya kuzey yamaç, 1200m, 11 v 1995, B.Mutlu 1351 (HUB 37178). Sütçüler, Kuzca köyü, Kuzcalan, *Astragalus* stebi, kırmızı toprak, 1350m, 5 vi 1975, H.Peşmen-A.Güner 2062 (HUB 02875!).

İstanbul: Arnavutköy, Durusu, İSKİ girişi, 70m, 19 v 2017, M.Keskin 7092, N.Özhatay, E.Özhatay!. Arnavutköy, Durusu kumul girişi, 8m, 19 v 2017, M.Keskin 7116, N.Özhatay, E.Özhatay!. Terkos gölü, Karaburun'dan Tahlikiye'ye doğru, kumluk yol kenarı, *Quercus* makiliği, 50-60m, 8 v 1962, Dudley 34535 (E!).

İzmir: Bornova, Kurudere, Karaçoban mevkii, 6 v 1971, M.Aydar, C.Ödemiş (EGE 15188!). Bornova: Kurudere köyü, Mengene mevkii, 6 v 1971, Aydar Ödemiş, (EGE 11656!). Kemalpaşa, Nifdağı, zirve yolu, yanın kulesine doğru, 1300m, 16 v 1975, Ö.Seçmen, E.Leblebici (EGE 24322!). Kemalpaşa, Nif dağı, 600m, 27 iv 1987, N.Zeybek (IZEF 2703!). Kemalpaşa, Nif dağı, Manastr kalezi, 450m, 9 v 1992, N.Zeybek (IZEF 1652!). Ödemiş: N Birgi, 500m, 17 v 1993, E.Sauer (IZEF 1254!). Yamanların şarkı ve karaçamdağı kurak otlaklarda, 900-1200m, v.1932, O.Schwarz (EGE 23174!). Bozdağ: pinetum, 1400m, 5 vii 1968, Huber-Morath (ISTO 15095!). İkikardeş, 15 v 1906, J.Bornmüller 9157 (E!). İzmir dağları, vi 1842, E.Boissier (E!).

Muğla: Eskiçine'ye gelmeden, Çine çayı, 5 iv 1995, N.Keyikçi, A.Er, G.Görk (EGE 18984!). Muğla, *Pinus brutia*, 19 iv 1965, C.Regel (EGE 15182!). Yatağan-Çine arası, Gökböl mevkii, granit kayalıkları, 300m, 2 v 1982, T.Ekim ve M.Koyuncu 5152 (AEF!). Yatağan-Çine, *Quercus coccifera* çalılıkları arası, 100m, 1 iv 1956, Davis 25553 et O.Polunin (E! ve ANK!). Yatağan ile Gökböl arası, *Quercus coccifera* makiliği açıklıkları, 300m, 20 iv 1965, Davis 41456 (E!).

Samsun: Ladik istasyonu, Karadağ, 1050m, 8 v 1965, C.Tobey 948 (E!).

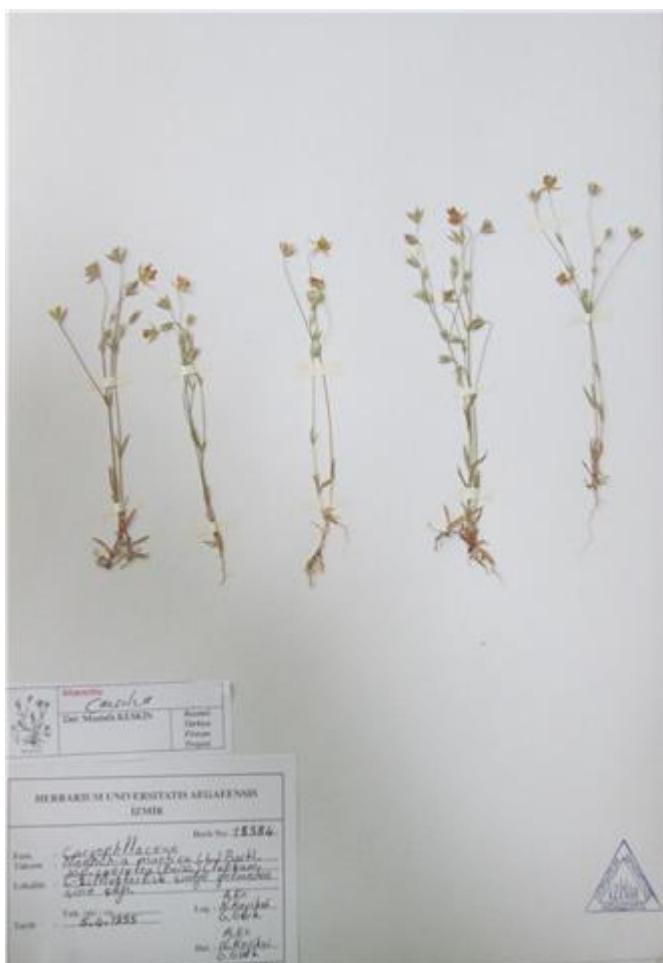

Figure 3. A Herbarium sheet

Figure 4. Distribution map

The most characteristic feature of the *M. coerulea* is the presence of blue to the purple corolla. This species is strictly related to *M. mantica*. But it is distinguished by the following characters:

- 1) Corolla blue to purple
- 2) Small, linear-lanceolate leaves
- 3) Corolla longer than calyx but never 2-fold
- 4) Capsule equal to sepals or slightly longer than sepal

3.3.3. *Moenchia akmanii* M.Keskin sp. nov. [Fig. 5, 6]

Type material: Türkiye, Ankara: Beypazarı, Eğriova, yavaş akan dereciklerde, 1550m, 26 vi 1973, Y.Akman (ANK 8518!).

Diagnose: *Moenchia akmanii* M.Keskin is close to *M. graeca* Boiss. & Heldr. but differs from it by its long stems (short in *M. graeca*); caudine leaves 4-6 pairs, 20-35 x 1.0-2.0 mm (2-4 pairs, 4-14 x 1.5-2.5 mm in *M. graeca*); axillary shoots present (absent in *M. graeca*); flowers 4-9 (1-5 in *M. graeca*); 5-6 x 1.8-2 mm, caudate at anthesis and 3-nerved (7 x 3 mm, acute at anthesis and 1-elevated nerved in *M. graeca*); anthers mauve (yellow in *M. graeca*).

Description: Annual herbs. Stems green, thin and flexible, 20-36 cm. Basal leaves linear, more or less withered at anthesis. Internodes very long. Cauline leaves 4-6 pairs, 20-35 x 1.0-2.0 mm, linear-elliptic, acute, not glaucous, 1-main vein. More axillary shoots present. Bracts 3-5 mm, elliptic with broad scarious margins, midvein brownish, and first bracts fimbriate at the base. Inflorescences 4-9 flowered, axillary; each flower supported by two bracts. Flowering pedicels 10-15 mm; fruiting pedicels 30-40 mm, 5-7 times as long as calyx, distinctly thickened above. Sepal 5; 5-6 x 1.8-2 mm at anthesis, narrowly lanceolate, with narrow scarious margins, caudate; 3-nerved, not indurate, and decurrent

to the base of calyx. Petal 5, white, as long as sepals or rarely exceeding, spatulate. Stamens 10; anthers mauve. The capsule as long as sepals (submature). Seeds c. 0,5 mm.

Flowering time: June (probably to July).

Habitat: Slow flowing streams, meadows

Etymology: This new species named after Professor Yıldırım Akman who is a leading Ecologist, author, and collector of this sample.

Examined specimens:

Ankara: Beypazarı, Eğriova, Orman açığı, 36 T 0417361,4481291, 1598m, 12 vi 2014, Haşim Altınözlü, M.Erol Demirbilek (NGBB 004337!).

Notes: *M. akmanii* is probably only an endemic species of Eğriova/Beypazarı.

The proposed new species is strictly related to *M. graeca*. Differences are summarized in table 1. Nevertheless, the first impression as a general structure seems to be the *M. mantica* type, but it is easily separated from the corolla as sepal or short, linear leaves, etc.

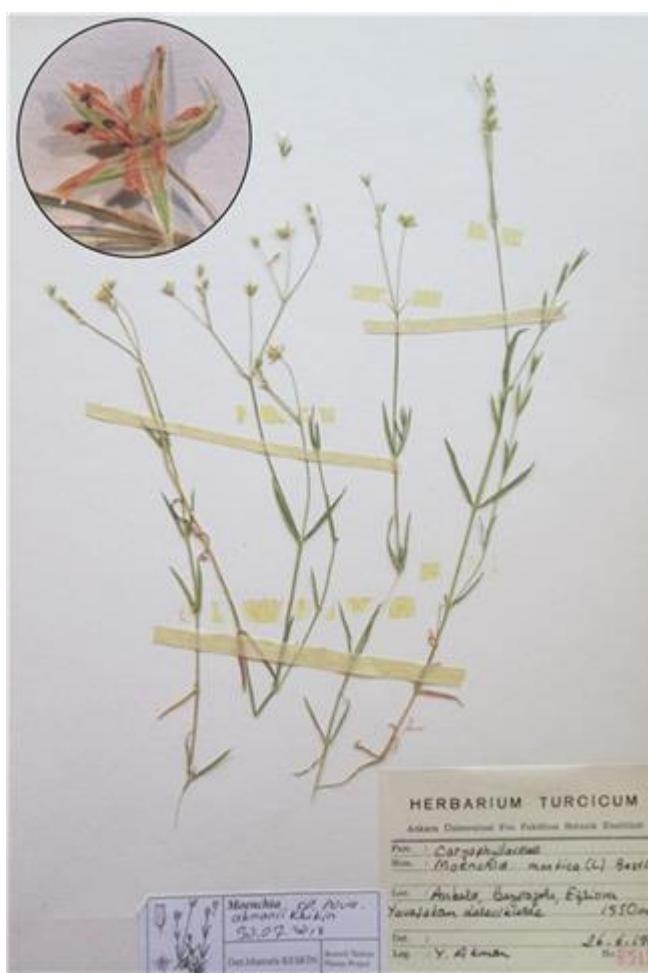

Figure 5. A Herbarium sheet (Holotype)

Figure 6. Distribution map

Table 1: Differences between *M. graeca* and *M. akmanii*

	<i>graeca</i>	<i>mantica</i>	<i>akmanii</i>
Stem height	4-15 cm, tinged purple	10-40 cm	20-36 cm, green, somewhat flexuous
Basal leaves	Oblanceolate, more or less withered at anthesis.	Linear to oblanceolate, more or less withered at anthesis.	linear, more or less withered at anthesis
Cauline leaves	2-4 pairs, 4-14 x 1.5-2.5 mm, linear-elliptic, subacute, somewhat glaucous.	3-5 pairs, 15-20 x 3-5 mm, glabrous, lanceolate to very narrowly elliptic-lanceolate	4-6 pairs, 20-35 x 1.0-2.0 mm, linear-elliptic, acute, not glaucous
Axillary shoots	Absent	Absent	Present
Bracts	Elliptic with broad scarious margins, midvein green	Ovate to lanceolate with broad scarious margins	First bracts fimbriate at the base, elliptic with broad scarious margins, midvein brownish
Inflorescences	Apical	Apical	Axillary
Flowers	1-5	3-8	4-9
Fruiting pedicels	2-8 times as long as calyx, distinctly thickened above.	3-7 times as long as calyx, distinctly thickened above.	5-7 times as long as calyx, distinctly thickened above.
Sepals	7 x 3 mm at anthesis, elliptic to broadly lanceolate, acute with broad scarious margins; 1-nerved, midvein thickened and indurate in fruit others not elevated, especially towards base.	6-9 mm at anthesis, broad and lanceolate, elevated 1-veined, and c.10 thin vein.	5-6 x 1.8-2 mm at anthesis, narrowly lanceolate, with narrow scarious margins, caudate; 3-nerved, not indurate
Petals	2/3 as long as sepals, elliptic-oblong, obtuse	slightly 2 x longer than the sepals, oblong to subspatulate or broadly spatulate to oblong or cuneate at base	as long as sepals or rarely exceeding, spatulate
Anthers	Yellow	Yellow	Mauve
Capsule	2/3 as long as sepals, ellipsoid	Ovoid, at most equal to sepal	as long as sepals (sub mature)
Seeds	0.5-0.6 mm.	0.8-1.1 mm	c. 0.5 mm

3.3.4. *Moenchia graeca* Boiss. & Heldr., Diagn. Ser. 2(1): 91 (1853). [Fig.7, 8]

Type: Many syntypes from Greece.

Small annual herbs. Stems 2-15 cm, usually unbranched. Basal leaves oblanceolate and more or less withered at anthesis; cauline leaves 2-4 pairs, 4-14 x 1.5-2.5 mm, linear-elliptic, subacute. Inflorescence 1-5 flowered. Bracts elliptic with broad scarious margins. Pedicels 2-8 times as long as calyx, distinctly thickened above. Sepals 7 x 3 mm at anthesis, elliptic to broadly lanceolate, acute with broad scarious margins; midvein thickened and indurate in fruit. Petals shorter than sepals, elliptic-oblong, obtuse. Capsule shorter than sepals. Seeds 0.5-0.6 mm.

Examined specimens

Denizli: Baymanlı mevkii, 700m, 18 v 1973, E.Tuzlacı (ISTE 24867!).

İzmir: Karaburun, Akdağ, 550m, 11 iv 1982, Sauer, E. et al. (IZEF 947!).

Manisa: Kula, lav akıntıları, 700m, 21 vi 1965, M.J.E.Coode ve B.MG.Jones (E !).

Figure 7. A Herbarium sheet

Figure 8. Distribution map

M. graeca is a little known species in Turkey. It is probably present in all Aegean and Mediterranean coasts. It is easily overlooked because of its small structure, short corolla, and early flowering phase.

3.3.5. *Moenchia erecta* (L.) P.Gaertn., B.Meyer & Scherb., Fl. Wett. 1: 219 (1799).

Small annual herbs. Stems 2.5–15 cm, glabrous, usually glaucous. Leaves somewhat petiolated at the base, 5–18 mm, linear to oblanceolate; caudine leaves sessile, 3–12 mm, linear to lanceolate, ascending, subrigid, acute. Inflorescences loose, a few-flowered. Bracts ovate-lanceolate with broad scarious margin. Pedicel unequal, longest pedicel 25–65 mm. Sepal 4; 4.5–7 mm, 3-veined, lateral faint, linear-lanceolate with broad scarious margin. Petals 4; linear-lanceolate, white, shorter than sepals. Stamens 4 or 8. Stillus 4 (-5). Capsule equalling or slightly longer than sepals, more or less cylindric. Seeds reddish-brown, finely tuberculate, 0.5–0.7 mm diam.

a. var. *erecta* [Fig.9,10]

Type: Lectotype, Herb. Linn. No. 177.3 (LINN).

Syn.: *Sagina erecta* L., Sp. Pl.: 128 (1753). *Cerastium tenuum* Viviani, Fl. Cors. 7 (1824). *M. quaternella* Ehrh., Beitr. Naturk., 2: 180 (1788) nom. illeg. *M. glauca* Pers., Syn. Pl., 1: 153 (1805) nom. illeg. *Cerastium quaternellum* Fenzl, Verbreit. Alsin.: 56 (1833) nom. illeg. *Cerastium glaucum* Gren., Mém. Soc. Émul. Doubs, 1: 47 (1841). *Cerastium erectum* (L.) Cosson & Germain, Fl. Env. Paris, éd. 1: 30 (1845).

Longest pedicel 25–55 mm. Sepal 4; 6–7 mm, glabrous, veined. Petal 1/2 to 2/3 as long as sepals, usually subdentate. Stamens 4. Capsule equalling or slightly exceeding sepals.

Examined specimens

Edirne: Keşan-Enez yolu, Kılıçköy'den 1.5km önce, -merada otlu çukurlar ve tepecikler üzerinde- 18 iv 1992, A.Byfield B 22, (ISTE 64848!).

Figure 11. A Herbarium sheet

Figure 12. Distribution map

M. erecta is generally similar to the *M. graeca*. It is easily separated from the thickened pedicels, stamens with small numbers, and 4-part flowers. This species probably has a wider distribution in Turkey.

4. Conclusions and discussion

Although *Moenchia* is similar to *Cerastium* in general structure, it is separated from it by whole petal and calyx vein with prominent back.

In this study, it is reported to six *Moenchia* taxa in Turkey. *Moenchia* is not a widely known genus in Ankara province. Although there are many flora articles, this genus has never been reported [9, 10, 11, 12, 13, 14, 15]. One of them is the new species as *M. akmanii* M.Keskin. Although it looks like *M. mantica* in terms of appearance, its basic taxonomic characters are close to the *M. graeca*.

A new identification key to the species of *Moenchia* has been organized in Turkey. All herbarium records and distribution maps of the studied species have been prepared.

Acknowledgments

I would thank them for the fact that some herbarium visits for this study are supported by the ANG foundation..
